Subject: Statement on the management of street lighting

Effective management of public lighting from SEAK company has been used in Ptrukša since 2015. The main motivation was to make savings at several levels: reduction of electricity consumption, reduction of the burden on the environment as well as the reduction of the operating costs on street lighting. We have used the saved money for the reconstruction of sidewalks and roads in our village. The big advantage was that during the installation of control system no excavation work was needed. The existing power lines were used.

Best regards,

.....
Alexander Takács, mayor
